And its Participating Wholesale Utility Customers

Prescriptive Lighting Program Guidelines

Application	LED Wattage	2018
High Bay, Low Bay, Exterior Dusk-to-Dawn	9 - 65 watts (new fixture)	\$20
	9 - 65 watts (retrofit lamp)	\$10
	66 - 130 watts (new fixture)	\$40
	66 - 130 watts (retrofit lamp)	\$20
	131 - 240 watts (new fixture)	\$60
	131 - 240 watts (retrofit lamp)	\$30
LED Exit Signs	under 8 watts	\$10
Linear Fluorescent	9 - 22 watt LED (new fixture, kit or panel)	\$5
	9 - 22 watt LED (retrofit tube)	\$2.50
	23 - 45 watt LED (new fixture, kit or panel)	\$10
	23 - 45 watt LED (retrofit tube)	\$5
	46 - 68 watt LED (new fixture, kit or panel)	\$15
	69 - 90 watt LED (new fixture, kit or panel)	\$20
Fluorescent freezer/refrigerator case lighting	5' or 6' LED	\$20
Unsensored control	Occupancy sensor	\$15

Qualifying systems include:

- Existing facilities only, no new construction. (Existing facilities have previously received permanent, electric service for twelve (12) months or more.)
- All Commercial and Industrial customers qualify. Other customers may qualify at the discretion of their local electric utility.
- Upgrade projects seeking more than \$5,000 in incentives require pre-approval and possible inspection by their local electric utility.
- All eligible projects require installation of LED technology.
- Incentive values are based on the input wattage of the new LED technology.

Prescriptive Lighting Program Guidelines

The following guidelines will apply. Exceptions will be handled on a case by case basis.

1. All replaced or retrofitted lighting equipment must be permanently installed.
2. Commercial and Industrial customers qualify for the new energy-efficient Light Emitting Diode (LED) fixture and/or retrofit incentives. Other customers may qualify at the discretion of their local electric utility.
3. Retrofit lamps and tubes utilize the same or same type of existing socket or lamp holder.
4. All new fixtures and retrofit lamps and tubes must be standard or premium listed by Design Lights Consortium (DLC) to ensure quality standards.
5. All incentives sought that are \$5,000 or greater require pre-installation notification and potential inspection by the local electric utility.
6. The Prescriptive Lighting Program is a “one-to-one” program in that an equal number of lighting fixtures will be impacted when compared to the number of fixtures considered for retrofit or replacement. If the quantity of existing compared to new fixtures varies significantly, an incentive may be considered under the terms and conditions of the EnergyWiseSM Custom Lighting Efficiency Program. Only lighting systems in existing facilities qualify for the upgrade. New construction does not qualify.
7. An incentive will be provided to the person responsible for the utility account after the equipment is installed and operating. No incentive(s) will be paid without the completion of the application form. The application form must then be signed by the owner and installing contractor (if applicable). The completed application form will then be submitted to the electric utility for processing. Sales receipt(s) or invoice(s) itemizing the new equipment and indicating the size, input wattage, type, make, model, purchase date, and vendor must accompany each energy efficiency incentive application.
8. All incentives are subject to specific program guidelines and general program guidelines.
9. The incentive payment or account credit to the owner will come directly from their local electric utility.
10. NPPD reserves the right to do random spot checks of the performance verifications to ensure program compliance.
11. Participating electric utilities are those that are wholesale customers of Nebraska Public Power District.
12. NPPD will make final determination of program compliance decisions and reserves the right to cancel the program with 30 days' notice.
