GROW MORE WHILE USING LESS

Prescriptive Irrigation Program

ENERGYWISESM
Use less. Spend less. Do more.

Irrigation is the lifeblood of many Nebraska farms...

Of the estimated 155,000 center pivots and linear tower systems in the U.S., it's no surprise more than half of them are in Nebraska, as we lead the nation with the most acres irrigated.

As we move into the future, producers are challenged more than ever to manage costs and increase yields in order to achieve sustainable operating margins. Producers have come to count on the time and cost savings pivots and linear systems bring. These systems also reduce energy and water use when compared to traditional irrigation methods. In as few as five seasons, sand, grit and other abrasive materials in irrigation water can impact your system's application uniformity.

As an EnergyWiseSM partner, your local electric utility wants to help producers make the most of the energy needed for irrigating with all-electric systems. Participating utilities will provide a **\$500 incentive** when producers replace all of a system's existing outlet components such as sprinkler heads, sprayers, rotators, plates, pads and nozzles, and regulators on qualified systems.

\$500 Incentive

To qualify, the system must be a minimum of four (4) sections in length with water supplied by an all-electric pumping system.

- **The majority of the system's existing nozzles, sprayers or sprinkler heads must be at least five (5) years old. For verification, a copy of the pivot's most-recent sprinkler/nozzle report (usually kept inside the pivot control panel) must be provided with a completed application and qualifying proof-of-purchase documentation.**
- **Qualifying systems are only eligible for the EnergyWiseSM Prescriptive Irrigation Program once every five (5) years.**
- **All applicable components identified on the sprinkler/nozzle report or chart (including sprinkler heads, sprayers, distribution plates, pads, rotators, nozzles, and regulators, if identified on the report/chart) must be replaced with new, permanently installed operational components before submitting application.**
- **Qualifying proof-of-purchase documentation includes sales receipt(s), invoice(s), and professional irrigation equipment dealer/consultant statement (must itemize the new components indicating the quantity, make, model and purchase date).**
- **Requests for deviation from the components identified on the sprinkler/nozzle report require an explanation on the application signed by a professional irrigation equipment dealer/consultant and are subject to approval by the local participating utility.**

Incentives valid as of 1-1-2020. Subject to change without notice. Verify current incentive amounts and program information at www.nppd.com. These EnergyWiseSM programs are only available to customers of NPPD and customers of its wholesale utilities.
