DAWSON PUBLIC POWER

CUSTOMER POLICY 201
Installation and Maintenance of Under Meter Disconnects

From the effective date of this Policy, the District will no longer furnish, install, or maintain under-meter disconnects, either for new connections or for services which are uprated in capacity. The consumer may elect to install a disconnect device under the meter at the consumer's own expense; however, the disconnect device may not be installed in the same enclosure which houses the metering equipment.

For new services and all uprates, the District will encourage the installation of a disconnect device or transfer switch at the meter location in coordination with the meter-loop installation.

Approved By Board: February 8, 2017
